Forward

The information contained in this publication has been prepared as reference data, which may be used in planning of maternal, infant or child health programs. The information presented here is taken from birth, death, and fetal death certificates. Population estimates are obtained from the U.S. Bureau of Census and the Oklahoma Department of Commerce.

Philosophical considerations are made to the concept of providing commonly used data and giving a survey of the types of data available. Should more detailed information be required in some area, this office may be able to supply that on request. In regard to a break in the annual consistency of some tables, this office has consistent trend data on many factors from 1975

A major change has occurred in regard to the classification of race of an infant. The birth certificate lists only the reported race of each parent. Until 1989, the National Center for Health Statistics (NCHS), the federal agency in charge of all Vital Records, used a complex algorithm to determine the race of the infant. Generally speaking, this formula identified the race of the infant as the race of the darker parent. In 1989, both classifications were reported. Since then, national comparisons with race can be made only using that of the mother. In this office, we have data using both classifications back to 1975.

In 2000, the U.S. Census Bureau instituted a major change in the way information on race is collected on the census instrument. Individuals are now able to report race in multiple categories rather than being required to choose one 'best' category. However, race is still collected as a single category in Vital Statistics. Given this radical difference, race-specific birth rates are not available for 2000.

The American Indian population does not reside within reservation boundaries in Oklahoma, and is, therefore, more heterogeneously distributed throughout the population of the state. As a result the standard way of classifying race does not reliably document the American Indian births and infant deaths. Special attention should be given to the data when studying information related to race.

There are a large number of unknown values for some characteristics on the birth certificate. When calculating percentages, unknown values are subtracted from the total number of births. Therefore, the percentages are based solely on reported values.

Other types of data and more detailed information from Vital Statistics may be requested by contacting Health Care Information, (405) 271-6225 of the Oklahoma State Department of Health.

Definitions

Live birth: An infant with signs of life at birth.

Low birthweight: A live birth weighing 5 lb. 8 oz. or less (under 2,500 grams).

Very low birthweight: A live birth weighing 3 lb. 5 oz. Or less (under 1,500 grams).

Prenatal Care:

First trimester - care beginning during the first 3 months of pregnancy

Adequate care - entry in first trimester and 10 or more visits

Little care - entry in first or second trimester and 1 to 3 visits

Late care - entry in third trimester with 1 or more visits

No care - never entered care (coding - zero trimester with zero or unknown visits, or unknown trimester with zero visits)

Low education: less than 12 grades of school completed

Unmarried: never married, divorced, or widowed at the time of the infant's birth

Fertility: births to a particular population of women (i.e. age group and/or race)

Short birth interval: less than 18 months since last delivery
less than 24 months since last delivery

High parity:

Teens - under 20 years of age with 2 or more previous births

Adults - ages 20 and over with 4 or more previous births

Gestational age: the time in weeks from last reported menses to birth

Race: the race of mother unless otherwise specified

County: the county of residence unless otherwise specified

Infant Death: a live birth dying before completing one year of life

Neonatal death: a live birth dying before 28 days of life

Post-neonatal death: a live birth dying between 29 days and one year of life

Fetal death (still birth): fetus 20 weeks or more gestation, born dead

Perinatal death: combined fetal and neonatal deaths

Formulas

Note: When calculating percentages for various maternal characteristics, the unknown values are always subtracted from the total values before the calculation is undertaken. Some of the tables in this document do not show the unknown values; however, they are used in the computations.

Birth rate (crude):
$$\frac{\text{All live births}}{\text{Total population}} \times 1,000$$

Fertility rate (age-specific birth rate):
$$\frac{\text{Births to women in specified age group}}{\text{Population of women in specified age group}} \times 1,000$$

Percent low birthweight:
$$\frac{\text{All births less than 2,500 grams}}{\text{All births minus births of unknown birthweight}} \times 1,000$$

Percent short birth interval:
$$\frac{\text{All births less than 24 months}}{\text{All births minus no previous births and unknown}} \times 1,000$$

Note: A similar calculation is made for short birth interval of less than 18 months. Only the primary birth is included in the case of multiple births.

Percent high parity:

Teens
$$\frac{\text{Births to women less than 20 years with 2 or more previous births}}{\text{All births to women under 20 years with a previous birth}} \times 1,000$$

Adults
$$\frac{\text{Births to women 20 years or older with 4 or more previous births}}{\text{All births to women 20 years or older with a previous birth}} \times 1,000$$

Infant mortality rate:
$$\frac{\text{All infant deaths}}{\text{All live births}} \times 1,000$$

Neonatal mortality rate:
$$\frac{\text{All neonatal deaths}}{\text{All live births}} \times 1,000$$

Post-neonatal mortality rate:
$$\frac{\text{All post-neonatal deaths}}{\text{All live births}} \times 1,000$$

Fetal mortality rate:
$$\frac{\text{All fetal deaths}}{\text{All live births}} \times 1,000$$

Perinatal mortality rate:
$$\frac{\text{All fetal deaths + all neonatal deaths}}{\text{All live births + all fetal deaths}} \times 1,000$$

Table 1. Number of births by race and Hispanic origin of mother, crude birth rates, and population estimates: Oklahoma and each County
